### **DETAILED ACTION**

Receipt is acknowledged of the preliminary amendment filed 06/06/02. An information disclosure statement was filed on 10/02/2004.

### ***Election/Restrictions***

This application contains claims directed to the following patentably distinct species of the claimed invention: Polymers of formula I, Ia, II.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, 37, 41, and 63 generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record

Art Unit: 1615

showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

During a telephone conversation with Barbara G. Ernst on 09/24/2004 a provisional election was made with traverse to prosecute the invention of structure I, claim 37-40, 58-62. Affirmation of this election must be made by applicant in replying to this Office action. Claims 41-65 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 73-40, 58-62 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Rodriguez (Journal of Materials Science).

Rodriguez discloses a trifusal derivative of acrylic acid which would read on the polymeric compound of general formula I when  $n=0$ . Further, combination with other monomers is disclosed at page 876, col. 1, paragraph 2. Therefore,  $n$  would not equal 0. The hydrolysable bond would have to be an carboxylic ester since the reactive group on an acrylic acid is carboxylic. Removal of the bioactive would occur through loss of

Art Unit: 1615

water to break the bond. The composition is used to coat vascular grafts, and functions as a pharmaceutical formulation in preventing platelet aggregation. An initiator is disclosed under Polymerization on page 874. The instant claims are anticipated by Rodriguez et al.

Luo et al is cited as a document of interest in its disclosure that a new amphoteric copolymer HTB can be synthesized by copolymerization of acrylamide, acrylic acid, allyl sulfonic sodium and acrylamido propane tri-me ammonium chloride. Therefore, n would not equal 0. A+ acrylic acid monomer, and the hydrolysable bond is again carboxylic ester.
